Location & Range

Location-free

Robots have no knowledge of their absolute location but may keep track of their relative location.

Location-based

Robots have perfect knowledge of their absolute location.

Range-free

Robots do not communicate or communicate via some kind of central base.

Range-based

Robots communicate within predetermined range.

Performance & Scalability

Performance

The general efficiency, which is defined differently per problem.

Scalability

The ability of maintaining performance when the population in the robot swarm is increased.
